

MNR Dental Collage

Best Practices :

1. Evidence based practice and research utilization in the clinical areas assistance.
2. Continuous monitoring of attendances & internal marks of UG & PG students & Sending attendance, marks obtained by student in exams to parents/guardian through SMS regularly.

Best practice 1

Title: Evidence based practice and research utilization within the clinical areas

Objectives: to supply evidence based data to deliver quality care supported best research

- To resolve problems in the clinical setting while practicing To achieve excellence in clinical setting/ patient care even quite the standard assurance standards
- To reduce variations in dental care and assist with effective decision making

To close the gap between the research and practice

The Context: Evidence based practice become a core requiremet in dental practice

- Dentistry has always used research to support the dental practice.

This is called research utilization.

- The faculty members use of appropriate search strategies and the selection of best data bases and the best research outcomes are utilized in the practice and teaching.

The Practice: the school and therefore the students use the five step process in their a day practice in the hospital:

1. Formulate a clinical question
2. Gathering the simplest evidence to answer the question
3. Critical appraisal of the best evidences
4. Integration of the evidence with the clinician's own expertise, assessment of the patient's condition, available healthcare resources, and the patient's preferences and values to implement a clinical decision
5. Evaluation of the practice change as a results of implementing the evidence.

Evidence Of Success: The quality of dental care is improved the clinical setting. As well as the use of evidences increased the faculty and student's confidence adaptability, improved their skills, and critical thinking and decision making.

Problem Encountered: In the clinical setting sometimes it is difficult to find time , access, and research expertise that are needed to search and analyse the evidence to find answers to their clinical questions.

Best practice 2

1. **Title of the practice:** Encouraging the UG students to represent in sports at university level with financial assistance

2 Objectives:

- Each sport has a set of rules and regulations to be followed which helps the students to stay fit and disciplined.
- Sports encourage students to showcase their talent and communicate with their team members
- Sports help to identify and hone their leadership skills which add value to their personality

3 **The context:** There is now an urgency to lay a strong foundation and strengthen physical education and sports in educational institutions

Regular physical activity also provides numerous health benefits to students these benefits include

- 1 Better academic performance
- 2 helps to forge character
- 3 promotes a healthy life style
- 4 teaches life skills
