ESSAY QUESTIONS

1. ORAL MUCCOSA -

Classification of oral mucosa

Based on the function, oral mucosa is of three types.

1. Masticatory mucosa (gingiva and hard palate)
2. Lining or reflecting mucosa
3. Specialized mucosa.

→ Lining mucosa lines the inner aspect of lips, cheeks, soft palate, floor of mouth, ventral aspect of tongue, alveolar mucosa and vestibule.

→ Specialized mucosa lines dorsal aspect of tongue and it has characteristics of both masticatory and lining mucosa. It has papillae and taste buds.

→ The masticatory mucosa is bound to bone and does not stretch.

Based on type of epithelium, oral mucosa is of two types

1. Keratinized
2. Non-Keratinized.

// ATTESTED //

Principal
MNR Dental College
SANGAREDDY

DADH

① The classification is based on these functions

- i) Masticatory Mucosa (Gingiva, Hard palate)
- ii) Lining Mucosa (Lip, Cheek, vestibular folds)
- iii) Specialized mucosa (dorsum of Tongue and taste buds)

i) The masticatory mucosa is bound to bear a great stretch, it bears forces generated when food is chewed

ii) Lining mucosa is not exposed to these forces and covers the musculature and is distensible, adapting itself to the contraction & relaxation of cheek, lip, tongue and to movements of the mandible

iii) The specialized ~~epithelial~~ mucosa have a sensory function

Stratified epithelium

- It has keratinocytes arranged in 4 cell layers
- ① basal ② spinous ③ granular ④ cornified layer

① Stratum basale

- Single layer of cuboidal cells
- The cells synthesise keratin and undergo mitosis
- The basal & parakeratotic spinous cells are referred to as stratum germinativum
- Only basal cells can divide
- Contain ribosomes

// ATTESTED //

Principal
MNR Dental College
SANGAREDDY

- Synthesize proteins of basal lamina, Proteins which form intermediate filaments of the basal cells

- The Basal cells are made up of squarish and heavily packed
